## Key Features

Learn Data Science **in Hindi**

Stand Out With **Microsoft** Certification

Accenture , PWC ,  
Tata Group Project  
**Certification**

**Lifetime** Access To  
Course Content

**500+** Hiring Partner  
Companies

## Master Most-In-Demand Tools

python™

NumPy

pandas

PySpark

data learn

Microsoft  
SQL Server

Power BI

matplotlib

databricks

seaborn

Azure  
Data Factory

BeautifulSoup

## Who can join this course ?

This course is **designed for** those who are :

**IT/Non-IT  
Graduates**

MBA

B.Com

Bsc.

BA

BCA

B.Tech

Or Any Professional Degree

Finance

Banking

IT

Healthcare

Supply Chain

Manufacturing

Insurance

Retail

Or Any Sector

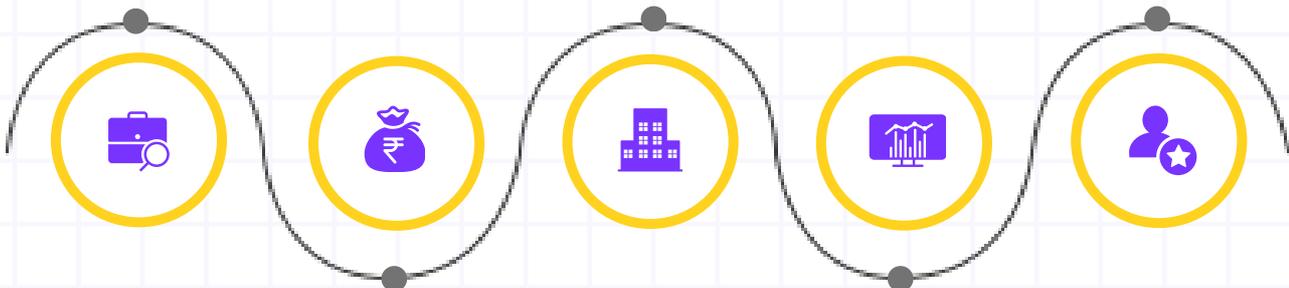

**Working  
Professionals**

## What to expect by the end of the course:

**Unlimited Job  
Opportunities**

Opportunity to work For  
**Fortune 500 Companies**

**Expertise In Data  
Science Tools**

Pay Range Spanning  
From **8 to 45 LPA**

**Strong Analytical  
Ability** to solve Real  
World Problems

## What is Data Science?

Data Science is not a technology.

**It is a Field of Study** that uses multiple tools and technology to find meaningful information out of data.

### Stages in Data Science

**Collecting Data**  
from multiple  
sources

**Cleaning and  
preparing the data**

**Analyzing data**  
through advanced  
techniques and  
tools

**Interpreting data**  
to make data-driven  
decisions for organizations

**Visualizing data**  
to identify patterns  
and trends

**₹8 to ₹45 Lakh** per annum

As per World Economic Forum Report, Data Science is considered, one of the most in demand job role with package ranging from 6 to 45 LPA

WORLD  
ECONOMIC  
FORUM

## Why Companies are in Need of Data Scientists?

Let's talk about Big giants like Samsung, Coca – Cola or Microsoft.

### Are their all products extremely successful?

While they have numerous successful products, they have also faced **product failures**.

Why do these products failure happen?

## Bad Decisions

- Wrong Market Strategy
- Poor Market Research
- No competitor analysis
- Overpricing or Underpricing

**Data Scientists** not only eliminates these bad decisions but comes up with much more refined strategies to avoid setbacks , **contributing to Organization's overall growth.**

**Who holds the  
decision-making  
power in the  
organization?**

**Top Management**

## Two Approaches to Decision Making

**Historical Approach**  
Experience and Intuition

**Modern Approach**  
Data-Driven Decisions

**PRESENT**

## Why Historical Approach Doesn't Work?

Relying solely on experience **may lead companies to Huge Loss.**

**NOKIA**

### Limited Perspective

**Nokia's failure** to adapt to the Android and iOS shift, rooted in rigid perspective, **led to losses** and its eventual acquisition by Microsoft.

**Kodak**

### Subjective Biasness

Kodak's decline resulted from a **subjective bias favoring** film-based photography, impeding a timely shift to digital imaging.

**YAHOO!**

### Missed Opportunities

Yahoo, missed opportunities to **dominate the search engine** and online advertising market, with their rigid decision-making.

## Companies Leveraging Data Science

Companies are using data **to make smarter decisions.**

### Personalized Recommendation

HSBC use data analytics for 39+ million customers, **driving customer-centric applications** such as personalization, recommendations, and **fraud detection.**

### Collects Real Time Data

DHL, a logistics company, uses Big Data analytics to **collect real time data in delivering packages** and providing real time solutions, reducing losses by 30%, **saving \$100 million.**

### Provides Prediction

Dream 11 manages about 100 million requests per minute, with more than **16 terabytes of information** and billions of data points per day to provide **real time results and predictions.**

## Why Modern Approach Works?

**No more Guesses!** Data Driven Decisions allows businesses to make informed decisions based on concrete evidence rather than intuition.

### Benefits of Data Driven Decision Making

Valuable  
Insights

Optimised  
Operations

Risk  
Management

Cost  
Reduction

Smarter  
Decision

Predict  
Future  
trends

McKinsey  
& Company

“A recent McKinsey **survey found that companies** that extensively use customer analytics are reporting **115% higher ROI** and **93% higher profits.**”

**115%**

**Higher ROI**

( Return on Investment )

**93%**

**Higher Profits**

**Growth**

## Why Data Science is trending?

The amount of data in the world **doubles every two years**. The more data is generating, the more companies are in the serious need for data scientists.

**MORE  
DATA**

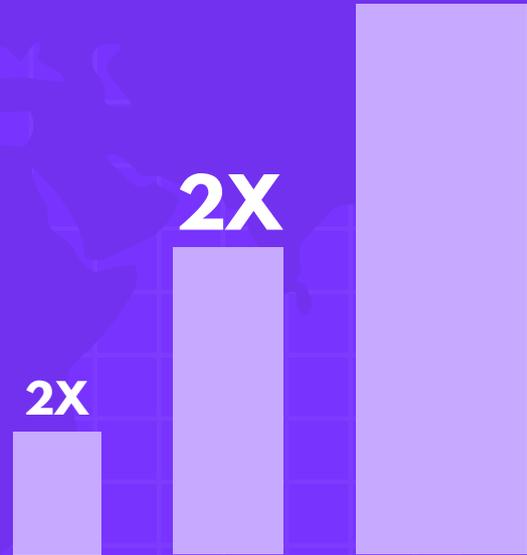

**MORE  
JOBS**

**2X**

**2X**

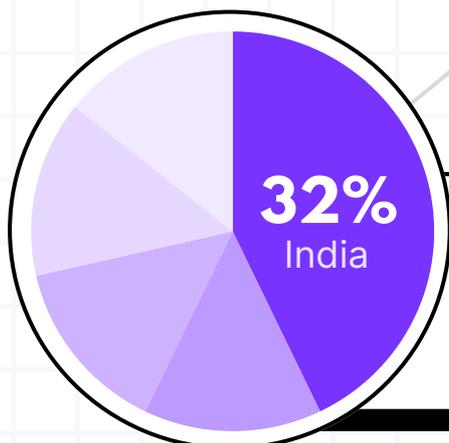

**2X**

**Data is Growing Exponentially**

## Growth in Data Science Job Roles

According to LinkedIn Jobs Reports, Data science has experienced **over 650% growth in job requirements globally since 2012**.

**Big Data Market**

India alone will capture **32% of the big data market worldwide**, generating millions of job roles.

## India Trends

TOI

“According to a report by the Times of India, India is the **2nd highest country in the world in recruiting** for data science job roles.”

# 29% HIKE

in **job postings** for data scientists in India in different job portals last year.

## Data Science Job Roles in India as of 2023

# 10L+

Naukri.Com

# 4L+

Shine.com

# 6L+

Indeed

# 4.5L+

Linkedin

# 11 MILLION JOB OPENINGS

in data science are predicted by 2026 , in india alone.

## How Different Sectors are using Data Science?

### Healthcare and Life Sciences

- Early Disease Detection
- Fraud Detection
- Patient Insights

### Pharmaceuticals

- Drug Development
- Supply Chain
- Pricing Strategy

### Banking

- Transaction Enrichment
- Anti-Money Laundering
- Customer Segmentation

### Finance

- Risk analysis
- Credit Scoring
- Stock Market Analysis

### Retail and E-Commerce

- Targeted marketing
- Competitor Analysis
- Competitive Strategies

### Manufacturing

- Predictive Maintenance
- Defect Detection
- Process optimization

### Supply Chain and Logistics

- Real Time Tracking
- Route Optimization
- Predictive maintenance

**DHL** **FedEx** **DELHIVERY** **Walmart**

### Telecommunications

- Subscriber analytics
- Network Optimization
- Customer Churn Prediction

**AT&T** **Jio** **vodafone** **airtel**

### Government

- Crime Prevention
- Disaster Management
- Urban Development

### Technology and Software

- Product Demand Analysis
- Cybersecurity Threat Detection
- Customer Behavior Analysis

**Microsoft** **Apple** **ANG**

## Differences In Job Roles and Responsibilities

### Data Engineer

A data engineer develop the data pipeline for collecting, and storing large volumes of data.

**Tools:**  Azure Data Factory   SQL

**Basic Pay – Range :** 8 to 20 LPA

### Data Analyst

Analyzes and interprets data to help organizations make informed decisions.

**Tools:**   

**Basic Pay – Range :** 6 to 20 LPA

### BI Developer

Creates interactive reports using PowerBI for Reporting and Decision-making.

**Tools:**  

**Basic Pay – Range :** 6 to 15 LPA

### Big Data Engineer/Analyst

Collect and analyze on large volume of data to find meaningful insights.

**Tools:**  Azure Data Factory    PySpark  databricks

**Basic Pay – Range :** 8 to 25 LPA

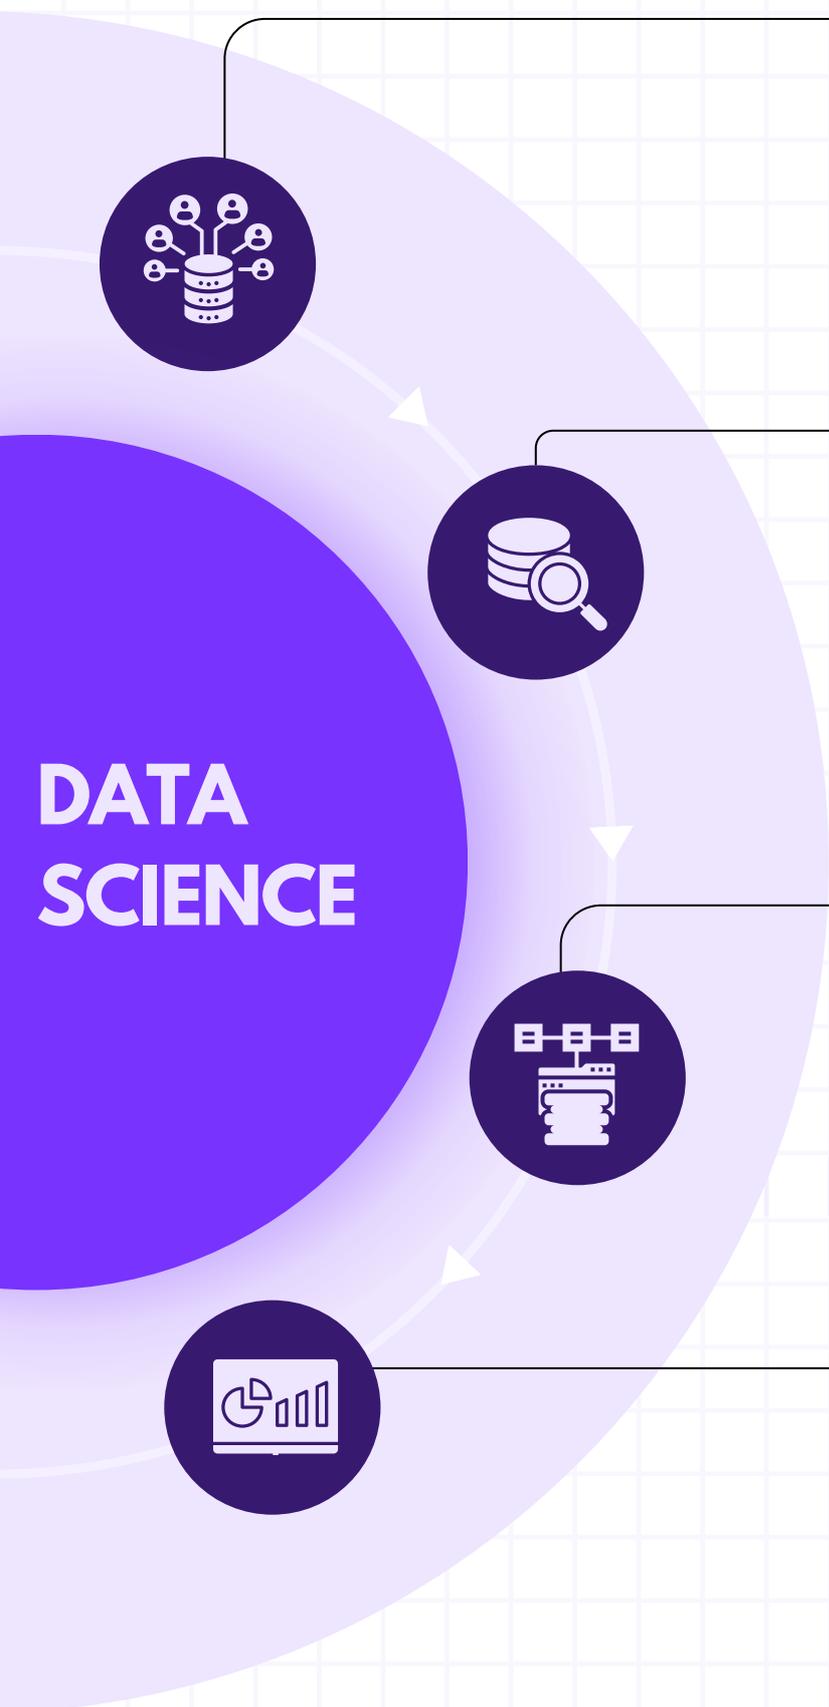

### Data Scientist

Data scientist work with other Data analysts, engineers to ensure business goals are achieved.

**Tools:**  Azure Data Factory    PySpark  databricks  Eccarr

**Basic Pay – Range :** 25 LPA +

## How it works?

### Staging

It is the **process of collecting** data from various sources .

### Processing

**Preparing and analyzing** the data to find meaningful insights

### Publishing

The **processed data is stored** in a centralized system, easily accessible to top management

### Reporting

Generate **interactive dashboards** from the processed data to make decisions.

# Your Journey to Success In Data Science

## Get Skilled

### Career-Oriented Curriculum

- Curriculum designed to meet industry demands
- Learn everything from basics to advanced
- Flexibility to repeat any topic multiple times

### Dedicated Mentorship For Career Transition

- Meet our mentors in live sessions and ask all your queries.
- One on One Interview Guidance From Mentors
- Connect to Mentors anytime.

## Get Industry Certified

- Resume Booster : Microsoft DP – 900 Certification
- Skill-Validation: Accenture , PWC and Tata Group Industry Certificate
- Masters In Data Science Certification

## Industrial Analytical Projects

- Solve the problems you will be solving as a Data Analyst
- Real-life world problems faced by Fortune 500 companies
- Domain Specific Projects to crack jobs in your own industry

## Get Placed

### Resumes that gets shortlisted

- Build ATS Based Resume in accordance to the Different Job Description
- Mention right keywords that impresses Hiring managers
- Prepare a resume that gets selected by Top Recruiters

### Crack Toughest Interviews

- Learn the soft skills needed to crack interviews
- Master the most asked questions in most of companies
- Join Mock interviews, Get Past Interview Datasets and continuous support through Interview Process

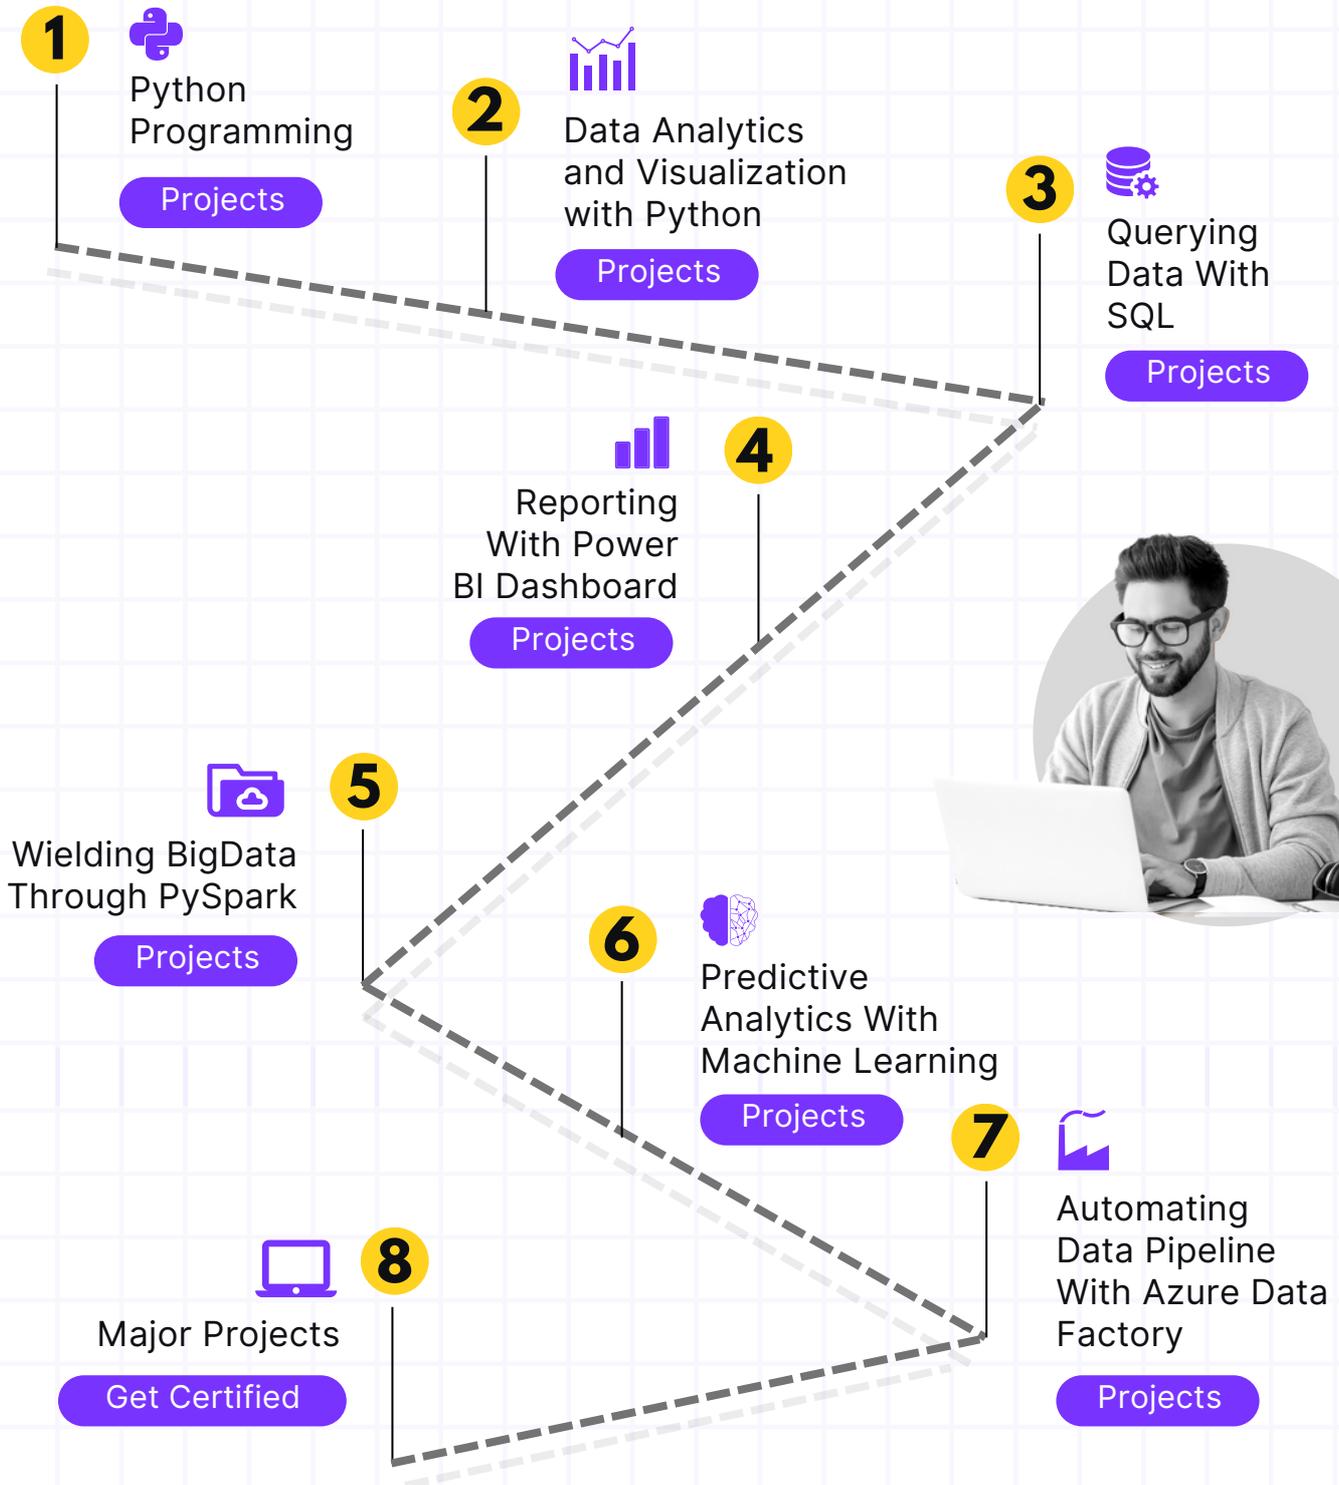

### Get Placed in Your dream Job

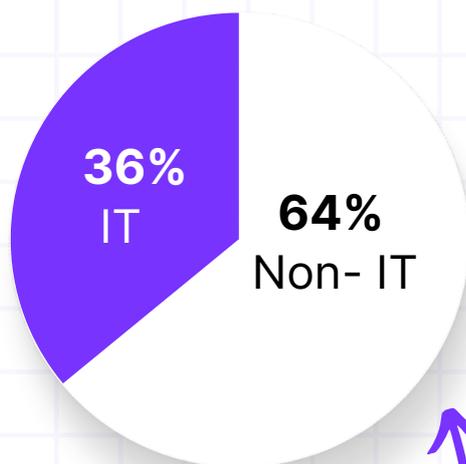

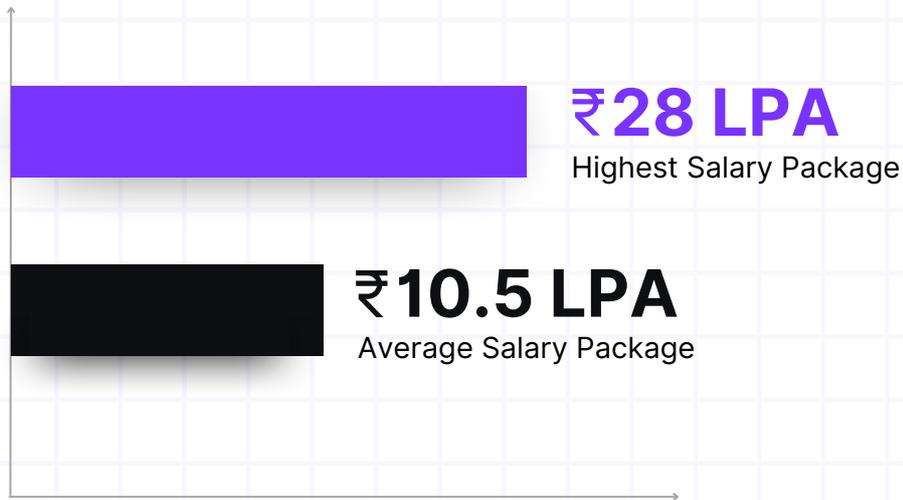

- Get Access to Interview Opportunities From Our Data Science Community
- Continuous Support From Resume Creation to Placement
- Crack Your First Job with right Certifications, Right skills and Right Approach.

## Course Roadmap

## Placement Statistics

**Background  
Statistics**

ConsoleFlare students get an average salary hike of 89% after graduating from ConsoleFlare.

**89%**

# Why Consoleflare?

## Immediate value and Career Transformation

**5000+ Career Transformation  
of Non-IT Professionals**

**Placement Support till you  
are Placed**

**Get Better Opportunities  
With Our Alumni Referrals**

**Strategic Partnership with our  
500+ Companies**

# Why Consoleflare?

## Unmatched Learning Experience and Support

Take Live Sessions on Weekdays,  
Practice On Weekends

Personalized one-on-one  
sessions to resolve any doubts

Call your mentors, AnyDay,  
Anytime

Learn data science in Hindi

# Why Consoleflare?

## Long-Term Benefits and Certification

Lifetime access to all your course content

No Extra Cost For Course Repetition For 12 Months

Skill Validation Certification From top industry leaders

Stand Out From Crowd , Get Microsoft Certified.

## Success Stories

160% Hike

Yogesh Kumar

I have **extensively worked on big data** technology like pyspark, databricks and Sql, after big data hadoop i was curious to learn spark so i joined masters in data science course by consoleflare. I started with hadoop where **Nihal sir explained** me the concept of hadoop like Hive, scoop etc in easy and relevant terms. Then after course completion the **placement support** was amazing.

● ----- **Fresher to Big Data Engineer**

100% Hike

Divya Sharma

I have got placed in **Hinduja Group** as a Data Analyst. I had a huge gap of 6 years in my career and I was totally disconnected from corporate world. When I joined ConsoleFlare, I found that the training, mentors, placement support, **everything is top-notch**. I never could have imagined myself working again if I hadn't joined ConsoleFlare. **Thank you so much**.

● ----- **Fresher to Data Analyst**

210% Hike

Sanjay Singh

I want to share my experience that Consoleflare's data science course is really **easy to follow** and well put together. They lay out everything clearly, so it's simple to grasp even the tricky parts. The **trainers are the best part** – they're super friendly and always ready to help, no matter what you need. If you're thinking about learning data science, Consoleflare is a **great place to start!**

● ----- **Sales to Senior Data Analyst to Data Engineer**

## Success Stories

230% Hike

Prashant Chauhan

I joined the Data Science and Machine Learning program. The mentors have helped me to **enhance my technical skills**. Specially Nihal sir helped me post-completion of the program and i was able to grab an **offer of 22 lacs**. A big thanks to Console Flare, Nihal sir and other mentors.

● ----- **Catastrophe Modeling Analyst to Data Consultant**

175% Hike

Ashish Kumar

Consoleflare's training is entirely **industry-led** and helps with understanding the practical ways of finding solutions using data analysis tools. They have **flexible class timings**. Also, they provided good placement assistance and helped me schedule interviews until I got selected. I am grateful to the whole team of ConsoleFlare for their contribution to **transforming my career**.

● ----- **Fresher to Data Engineer**

196% Hike

Akashdeep Kumar

ConsoleFlare's Data Science Training stands out for its **cost-effectiveness**, expert trainers with real-world experience, and comprehensive tool coverage. The added benefit of class **recordings and personalized interview preparation**, especially from Abhishek Sir, along with effective placement assistance, makes it a highly valuable choice.

● ----- **Sales to Data Analyst**

## Success Stories

263% Hike

Rahul Shukla

Thank you team consoleflare for helping me **get placed RCPL**. What i like most about ConsoleFlare's Data Science training program and curriculum is that its' tailored to current market needs. **Their 24/7 support system** is more than just assistance, they help you at each step and are available all the time. To anyone looking to get into Data science should go for consoleflare. Thanks.!

● ----- **Quality Analyst to Data Analyst**

145% Hike

Shashank Karn

With Console Flare, the journey has been incredible. I got exposed to the modern data industry with the **Masters in Data Science program**. The instructors are highly qualified and skilled subject-matter specialists. It was a fantastic learning opportunity and helped me in **getting an amazing job** with a **good salary package**. Thanks, Console Flare.

● ----- **Assistant System Engineer to Data Engineer**

176% Hike

Mohd. Aamir

I felt the need to shift my career to data science and joined Console Flare. Their training is entirely **industry-led** and helps with understanding the practical ways of finding solutions using data analysis tools. It was one of the **best learning experiences** of my lifetime. With their continuous help and support I got placed as a **Data Analyst at VLCC Wellness**.

● ----- **Supply Chain Executive to Data Analyst**

## Success Stories

123% Hike

Aditi Saxena

I wish to express my heartfelt **gratitude to Console Flare** for helping me find a job. I must also give a special mention to Abhishek Mishra, Ayush Mishra, Nihal Jaiswal, and Aditya Jaiswal. They not only **resolved my project-related queries** but also provided essential guidance for near future. Each of them brings a **unique perspective** to the learning process, making it comprehensive and engaging.

● ----- **Asset Manager to Finance Analyst**

S&amp;P Global

235% Hike

Deepak Suleja

I wanted to thank Consoleflare for your **incredible guidance** and support. Your expertise has been invaluable, and I truly appreciate the role Consoleflare played in my success. Thanks to your help **I got placed**, and I'm excited for the future with the skills I've gained. Your dedication and **personalized attention** have made a significant impact.

● ----- **Technical Support to Data Analyst**

3i Infotech  
LIMITLESS EXCELLENCE

196% Hike

Jog Giri

I felt the need to shift my career to data science and joined Console Flare. Their training is entirely **industry-led** and helps with understanding the practical ways of finding solutions using data analysis tools. It was one of the **best learning experiences** of my lifetime. With their continuous help and support I got placed as a **Data Analyst at VLCC Wellness**.

SOLUTIONS

# Curriculum

Learn Everything  
From Basics To  
Advanced

## 1 Python

### Know How Programming Works

Understand the ABC of Programming and write your first program

- Introduction to programming basics
- Introduction To Python Programming
- Tool Setup
- How to write Programs

### Importance of Python In Data Science

Know why companies are looking for analysts with python skills

- Why Python is So Popular ?
- 80 % market acceptance of Python.
- How Data Analysts use python.

### Python Data Types and Variables

Understand the difference in Data and how to store data in variables

- Standard Data Types
- How variables are used ?
- Naming Convention
- Memory Allocation

## Python Operators

Learn How numerical calculations are performed in python

- Arithmetic Operations
- Assignment Operations
- Comparison Operations
- Logical Operations
- Operator Precedence

## User Input in Python

By this chapter , you will be able to take values from user and create meaningful programs

- Input() function
- Type Conversion

## Strings

Learn to deal with data in text format and master data cleaning techniques

- Memory Allocation of Numbers vs Strings
- Single Line vs Multiline String
- Indexing and Slicing in String
- String Concatenation
- String Formatting
- Fuctions Used in Stings
- String Methods
- String Manipulation
- Data Cleaning Techniques In Strings

## Conditional Statements and Loops in Python

**Understand how Conditions like if and nested if works and understand control flow of a program**

- What are conditions and control flow
- if – statement
- If-else statement
- if-elif statement
- nested if statement
- while loop
- for loops
- range()

## Data Structures

**Learn How numerical calculations are performed in python**

- List and List Comprehension
- Tuples
- Set
- Dictionary

## Functions

**Create your own functions in python to reduce number of scripts and repetitiveness**

- What are functions
- Define a function
- Calling a function
- Parameters and Arguments
- Arbitrary Arguments
- Recursion

## File Handling

**Know how to perform operations and automation on Folders and Large Files**

- OS Module
- Crud Operation on Files and Folders
- Access Modes
- Working with unstructured data

## Exception Handling

**Deal with the errors and exceptions in your python scripts**

- Errors vs Exceptions
- Try except Methods
- Different types of Exceptions

## Data Collection Through Python Libraries

**Learn industry relevant skill to collect real time data from websites and multiple sources and automate the whole process**

- Requests library
- BS4 library
- BeautifulSoup
- HTML Basics
- Convert data to json and excel Format
- Collect Product Data From Flipkart
- Data Collection Through API
- Data Collection Through Job Portals
- Data Collection of Stock Prices Through Money Control

## 2

**Numerical Computation With Numpy****Introduction To Numpy**

Learn How numpy is contributing to the data science world and is one of the most important and easy to use library for Numerical Calculation

- Introduction to library
- Installation of Numpy
- Overview of Numpy and its role in scientific computing

**Understanding NumPy Arrays**

Learn about different types of arrays and how to perform basic operations

- List To Array Conversion
- Single – Dimensional Arrays
- Multi – Dimensional Arrays (2D , 3D)
- Element Wise Operations

**Array Operations**

Get to know about the basic mathematical operations to perform between arrays

- Mathematical Operations in Numpy
- Universal Functions (ufuncs) in NumPy
- Broadcasting

## Array Shape Manipulation

Learn how to reshape and transform the arrays for Array Operations.

- Transpose arrays
- Reshaping Arrays
- Concatenation and splitting of Arrays

## Statistical Operations with NumPy

Focus on the statistical computing with NumPy

- Measure of Central Tendency (mean, median, mode)
- Measure of Dispersion (Standard Deviation, Variance, Range, IQR, Percentiles)
- Measure of Relationship (Correlation Coefficient , Covariance)

## Working on File with NumPy

Work on a Uber Ride Dataset to find meaningful insights like average speed , Most busiest region , with the help of NumPy

- Excel File To NumPy Array Conversion
- Performing Data Manipulation and Calculation
- Work on Uber Ride Dataset to find key analysis

## 3

**Data Manipulation and Analysis With Pandas****Introduction To Pandas****Get to know the importance of pandas in Data Science**

- Overview and its role in Data Science
- Pandas Setup

**Reading and Loading the Data****First step is to load the data in pandas to perform analysis**

- Load Structured Data (Tabular Format, Excel , SQL)
- Load Semi-Structured Data (HTML , XML , Json)
- Load Unstructured Data (Emails, Surveys and Feedback , Records)

**Data Structures in Pandas****Learn about Data Frame and Series , the two most important Data Structure in Pandas**

- Introduction to DataFrame and Series
- Differences between DataFrame and Series.
- Indexing and metadata
- DataFrame Properties
- Series Properties
- DataFrame Basic Functions
- Series Basic Functions

## Data Exploration

### Explore your data before analysis using Data Structure Properties and Functions

- Index and columns
- Head and tail functions
- Statistical summary
- Access Columns and Column Operations

## Filtering and sorting in Pandas

### Filter the data you need to work on , like you need to work on those customers who have purchased more than once

- Filter with iloc (index based filtering)
- Filter with loc (location based filtering)
- Isin() function
- Advance Filtering with set\_index()
- Sort multiple Columns with sort\_values()
- Sort indexes

## 4

**Data Cleaning and Preprocessing with Pandas****Handling Missing and inconsistent Data****Deal with the inconsistencies and missing values in data with pandas**

- Identify missing values using `isnull()`
- Drop and fill missing values
- Impute missing values using mean , median and interpolation
- Drop irrelevant columns
- Clean inconsistent data using fuzzy matching.
- Dealing with Outliers

**Dealing with Duplicate Values****Find and remove the unnecessary duplicate values**

- Identify Duplicated records
- Count and Filter Duplicate Records
- Remove Duplicate records with `drop_duplicates()`
- Data Deduplication Strategies

**Check Data Validation**

**Data validation is the process of ensuring that data is accurate, complete, and meets specific requirements or standards.**

- Perform string functions on series
- Set standard rules
- Remove Data that does not meet validation.

## Check Type Conversion

Learn to convert data type of columns to perform operations

- Identify Data type of columns
- Use `astype()` to convert column types

## Working on Different Tables

Learn how to work on multiple files such as merging and concatenating multiple files.

- Introduction to Joining and Merging
- Concatenation
- Inner and Outer Join
- Left and Right Join
- Join on Different Columns
- Merging on index

## Deal With DateTime in Pandas

Learn how to perform operation on Dates with the pandas datetime functions.

- Convert column to datetime
- Performing Filter operations on Date
- Performing Aggregate Operations
- Datetime Series
- Timedelta
- Resampling
- Time Zone Handling
- Advanced Data Calculation With `pd.DateOffset`

## 5

**Statistical Exploration With Pandas****Descriptive Statistics**

**Learn to summarize and extract information from the numerical of a dataset**

- Measure of Central Tendency and Dispersion
- Measure of Shape
- Skewness and Distribution
- Percentiles and Quartiles
- Aggregate Functions
- Group by Operation for aggregating data
- Normalize
- Pivot Tables
- Outlier Detection
- Advanced Statistical Techniques

## 6

**Importing Data From SQL To Pandas DataFrame****Fetch Data From SQL Server**

**One of the key skill in Data Science is to fetch data from SQL Database, you will be using as a Data Analyst**

- Connection To SQL Database
- Different SQL connectors and libraries
- Fetch , Process and analyze Data from SQL
- How to access data from SQL in cloud (AWS/Azure)
- Incremental Load from SQL to pandas Dataframe
- Automate your Script to execute script on daily basis.

## 7

**Data Visualization With Matplotlib and Seaborn****Introduction to Data Visualization****Learn the basics of visualization in this chapter**

- Types of Visualizations
- Difference between plots and when to use them
- Introduction to figures and axes

**Matplotlib Plots****Transform your analysis to Visualization with the matplotlib library**

- Pair wise Data : Line Chart , Scatter Plot , Stack Plot , Bar , Stairs
- Statistical Distribution : Histogram , Box Plot , Violin , Pie Chart
- Gridded Data : imshow plot , streamplot

**Seaborn Plots****Seaborn is much more advanced matplotlib. Create much more advanced graph with the help of seaborn**

- Relational Plots : relplot , scatter , line plot
- Distribution Plots : displot , histplot, kdeplot
- Categorical Plots : cat , strip , swarm , boxplot, pointplot
- Regression Plots : Implot , regplot
- Matrix Plot : Heatmap
- Theme and Styling

## 8

**SQL For Data Analytics****Introduction to SQL**

Advance your data science career with this comprehensive SQL curriculum, covering syntax, database management, advanced data modification, and optimization

- What is SQL
- When SQL is used
- Microsoft SQL Server Installation

**SQL Select Statements**

Understand how to filter data based on conditions, perform range queries, and employ logical operators and pattern matching

- SQL Select Syntax and Where Clause
- SQL In and Between
- SQL And, Or, Not Operators
- SQL Like and Wildcards
- Assignment and Solutions

**Sorting and Grouping in SQL**

Gain skills to sort, group, and analyze data effectively in SQL, enabling you to derive meaningful insights

- SQL Order By
- SQL Group By
- SQL Having Clause
- SQL Min and Max
- SQL Count, Avg, Sum

Microsoft®  
SQL Server®

## Joins in SQL

Learn how to merge different tables using Different Joins Techniques

- SQL Inner Join
- SQL Foreign Key
- SQL Left Join
- SQL Right Join
- SQL Full Join
- SQL Self Join
- SQL Union
- Assignment and Solutions

## Nested Complex Queries

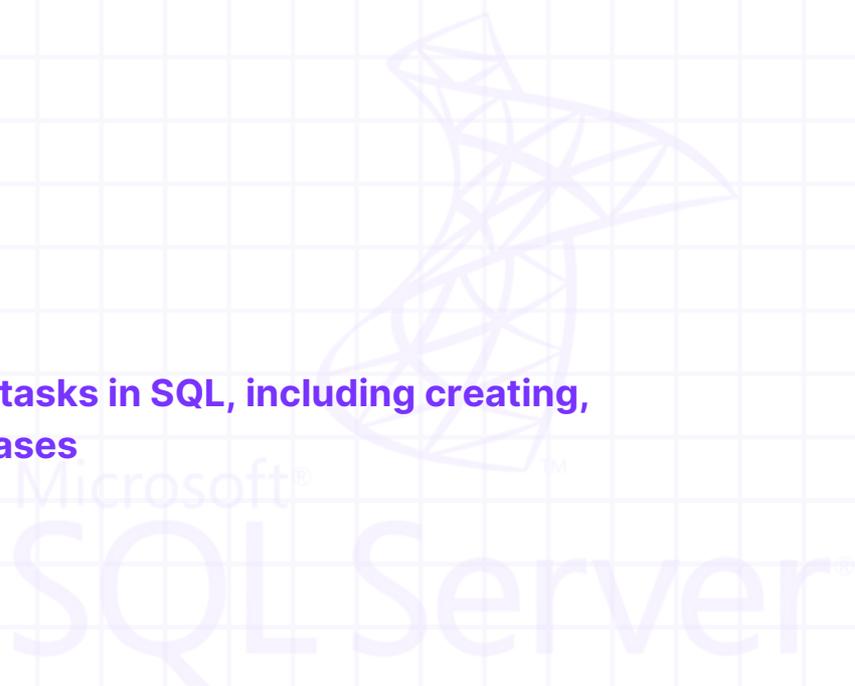

Handle complex data scenarios by mastering SQL nested queries, existence checks, conditional operators, and date functions

- SQL Nested Queries
- SQL Exists
- SQL Any, All
- SQL Dates
- SQL Case
- Assignment and Solutions

## Database in SQL

Perform database management tasks in SQL, including creating, dropping, and backing up databases

- Create Database
- Drop Database
- Backup Database

## Data Type and Tables in SQL

Learn about data types, creating, altering along with optimizing queries through table aliases

- SQL Data Types
- SQL Create Table
- SQL Drop Table
- SQL Alter Table
- SQL Table Aliases
- Assignments and Solutions

## Insert Records in SQL

Insert records in SQL and master auto-increment techniques

- SQL Insert
- SQL Insert using Select
- SQL Auto Increment
- Batch Insertion with a Single Statement
- Inserting Data into Tables with Multiple Columns
- Assignment and Solutions

## Update Records in SQL

Update any record with Update statements in SQL Table

- SQL Update
- SQL Update Advance
- Updating Single and Multiple Columns
- Avoiding Unintended Updates
- Assignment and Solutions

## Delete Records in SQL

### Learn to Drop and Delete Records using SQL Query

- Delete Records in SQL
- Truncate Table
- Assignment and Solutions

## Connecting MS-SQL with Python

### Learn one of the most important key skill for data analysts to connect Python with MS- SQL Server

- Python to Connect to MS-SQL
- Python MSSQL libraries
- SQL Queries from Python
- SQLAlchemy
- PyODBC
- Establishing Connection Through Create\_Engine

## Windows Functions in SQL

### Master proficiency in SQL window functions, essential for dynamic data manipulation and analysis

- Introduction to Windows Functions
- Syntax and Usage
- Common Window Functions
- Partitioning Data with Windows Functions
- Order By Clause in Windows Functions
- Examples and Scenarios

## Stored Procedures and Functions

**Learn Stored Procedures and functions in SQL enables efficient data processing, reusable code, improve performance**

- Introduction
- Creation
- Execution
- Functions
- User-Defined
- Calling
- Benefits
- Best-Practices
- Assignment

## Optimization of Queries

**Know How to reduce query response time, and ensure efficient data management with Optimization Techniques**

- SQL Index
- SQL Triggers
- Assignment and Solutions

Microsoft®  
SQL Server®

## 9

**Interactive Reporting with Power BI****Introduction to Power BI****Learn most widely used BI Tool and create interactive dashboards**

- What is Power BI?
- Why choose Power BI?
- Power BI and its competitors
- Why is Microsoft Power BI a leader in BI Analytics?

**Data Cleaning & Transformation****Implement Data Cleaning Techniques we learnt in Power BI**

- Connecting to different sources in Power BI
- Introduction data transformation
- How “Get Data” in Power BI works
- How to work with Power Query Editor
- Cleaning data in Power Query Editor

**Data Modeling****Understand data modeling for designing efficient databases**

- Introduction to semantic data models and Model Schema
- Star Schema & Snowflake Schema
- Relationships and Different types of cardinality
- Cross-filter direction and Default Summarization
- Data Categories and Data Formatting
- Date Hierarchies and Custom Hierarchies

## Reporting in Power BI

Learn to create impactful reports in Power BI by mastering various visualizations and customization techniques

- Introduction to Power BI visuals
- Different types of visuals
- How to customize visual data and design
- How to convert any report mockup/image into Power BI Report
- Using hierarchies in visuals
- Drill-up & Drill-down
- Drill-through pages
- Default Tooltips & Custom Tooltips
- Map visuals
- Q&A Visuals

## DAX & Advanced Reporting

Learn DAX for advanced reporting in Power BI, covering calculated columns, dynamic titles, toggle buttons, calculated tables and optimization strategies

- Introduction to DAX
- Calculated Columns and Measures
- Dynamic titles using measures
- Working with Bookmarks
- Buttons and bookmarks
- Create interactive menus with bookmarks
- Toggle buttons with bookmark
- Calculated Tables
- Different DAX functions and their use-cases
- Optimizing DAX expressions
- Row-Level Security

## Publishing Reports and Power BI Cloud

Learn to manage workspaces, create dashboards, understand semantic models, and refreshing reports in the cloud, scheduling refreshes

- Power BI account and Licenses
- Publishing report to Power BI Service
- Workspaces
- Dashboards
- Quick Insights
- Semantic Model vs Report
- What is Power BI Gateway
- When do we need a gateway
- Refreshing report in Cloud
- Scheduled Refresh
- Mobile-Friendly Reports

## Projects

Solve Complex Challenges and apply your skills to build Useful Reports

- Movies Dashboard
- Sales Dashboard
- Learners Performance Dashboard

## 10

**Wielding Big Data Through PySpark****Introduction to Big Data**

**Understand the Big Data Problem Companies are facing and its real-world applications.**

- Big Data Problem Overview
- Key Concepts and Trends
- Real-world Applications
- Data Processing Approaches
- Comparison of Traditional and Modern Methods

**Cluster Computing and Apache Spark Framework**

**Get to know how cluster computing works in Apache Framework.**

- Understanding the role of Spark in distributed computing.
- Illustrating real-world use cases.
- Basics of Apache Spark Architecture
- Learn foundational components of Apache Spark.
- Practical exercises to reinforce understanding of Spark's architecture.

**Databricks Account Setup and First PySpark Program**

**Setup Databricks Account and write your first PySpark Program.**

- Walking through the process of setting up a Databricks account.
- Addressing common issues encountered during setup and programming.

PySpark

## Fundamentals of PySpark

Learn how to manipulate , type cast and perform basic queries in PySpark.

- Basic operations for querying and manipulating data in PySpark.
- Leveraging native functions, type casting, and data exportation.

## Advanced PySpark Concepts

Apply Pandas Aggregate Functions in PySpark and perform Data Cleaning with Advanced PySpark Functions.

- Aggregation, Datetime Operations
- Data Cleaning, User-defined Functions, Joins
- Transformations and Actions

## Optimization Techniques in PySpark

One of the most important skill for Big Data Analytics is to apply Different Optimization Techniques.

- Lazy Evaluation, Broadcasting, Caching
- Pandafy, Partitioning, Bucketing
- Handling Data Skewness (Salting)

## Data Management Strategies

Learn Data Management Strategies using Repartitioning.

- Understanding and implementing data repartitioning in PySpark.
- Utilizing Parquet files for intermediate data storage.

## Advanced PySpark Features

Explore advanced PySpark features, including widgets and window functions

- Magic Queries, File System Commands
- Integrating interactive widgets into PySpark applications.
- Utilizing window functions for advanced analytics in PySpark.
- SQLSpark-PySpark Data Exchange

## Integration and Practical Applications

Get Hands-on With Practical Applications using PySpark

- Integrating external libraries to extend PySpark functionality.
- Setting up Multi-node Clusters on Azure
- Designing end-to-end data pipelines using PySpark.
- Project: Netflix Recommendation Engine

## Additional Course Elements

Learn storage integration, and interview preparation for a well-rounded understanding of Databricks in real-world applications.

- Mounting Storages to Databricks
- Configuring storage integration within the Databricks environment.
- Integration with Other Technologies
- Exploring integration possibilities with complementary technologies.
- Interview Questions
- Preparing for interviews with a set of structured questions and answers.

PySpark

## Introduction to Azure Data Factory (ADF)

### Understand the importance of ETL and why we need them

- Overview of Azure Data Factory (ADF)
- Understanding Extract, Transform, Load (ETL)
- Importance of ETL in data processing
- Setting up Azure Account

## Basics of Azure Data Factory

### Learn how to get started with Azure and Azure Data Factory

- Key components of Azure Data Factory
- Basic terminology and concepts
- Exploring data connectors in ADF
- Defining datasets for data movement
- Configuring data sources and sinks
- Overview of the Copy Data tool
- Configuring copy activities
- Monitoring and troubleshooting data copy operations
- Introduction to Integration Runtime (IR)
- Types of Integration Runtime
- Configuring and managing Integration Runtimes
- Building a basic pipeline in ADF
- Adding activities to the pipeline
- Validating and debugging pipelines
- Configuring connections for Amazon S3 and ADLS Gen2
- Implementing data transfer pipeline

## Advanced Pipelines with ADF

### Master the Data Pipelining techniques with ADF

- Understanding incremental data loading
- Implementing change tracking in ADF
- Best practices for incremental loading
- Handling dependencies and relationships
- Introduction to control flow activities
- Sequence and dependency management
- If activity for conditional logic
- Loops in ADF pipelines
- Working with variables and parameters

## Triggers and Advanced ADF Features

### Automate the Data Pipelines with Triggers and Different complex ETL Processes

- Integrating Databricks with ADF
- Manual triggers and scheduled triggers
- Tumbling window triggers for time-based execution
- Data flow vs pipeline approach
- Filter, Join, conditional split, aggregation, sorting, pivot & unpivot transformations

## Real-world ETL Scenario in Azure Data Factory

### Implement ADF in your data warehousing projects

- Applying learned concepts in a practical ETL scenario
- Designing and implementing an end-to-end ETL pipeline

## Introduction to Machine Learning

Get to know what machine learning is and understand the fundamental concepts, types (Supervised, Unsupervised, Reinforcement), and applications of Machine Learning.

- Linear Regression
- Internal working with Maths
- Python code with dataset
- Practice Dataset

## Multiple Regression

Analyze and model the relationship between variables, make predictions, and understand the impact of independent variables on the dependent variable in a linear context.

- Internal working with Maths
- Python code with dataset
- Practice Dataset

## Logistic Regression

Predict and understand the likelihood of binary outcomes, making it valuable for classification problems such as spam detection or disease diagnosis.

- Internal working with Maths
- Python code with dataset
- Practice Dataset

## K nearest neighbour

IT enables you to predict outcomes based on the majority vote, making it effective for pattern recognition and recommendation systems.

- Internal working with Maths
- Python code with dataset
- Practice Dataset

## Decision Tree

Decision trees allow you to make decisions by recursively partitioning the data based on features.

- Internal working with Maths
- Python code with dataset
- Practice Dataset

## Random Forest

Random Forest is a learning technique that combines multiple decision trees to enhance predictive accuracy.

- Internal working with Maths
- Python code with dataset
- Practice Dataset

## Naive Bays

Naive Bayes is a probabilistic method used for classification, especially in scenarios like text classification.

- Internal working with Maths
- Python code with dataset
- Practice Dataset

## SVM

**SVM is a strong algorithm for classification, creating the best possible boundary between different groups in data**

- Internal working with Maths
- Python code with dataset
- Practice Dataset

## Unsupervised Learning

**Explore data without labeled outcomes, helping to uncover hidden structures, relationships, or clusters within the dataset**

- K means Clustering
- Internal working with Maths
- Python code with dataset
- Practice Dataset

## Hierarchical Clustering

**Learn Hierarchical clustering to organize data in tree structure**

- Internal working with Maths
- Python code with dataset
- Practice Dataset

## Bonus(introduction about other AI tools)

**Generate human-like language with NLP, manipulate images and videos using OpenCV, build conversational agents with ChatGPT.**

- Reinforcement learning
- NLP
- Open CV
- Chat GPT
- STable Diffusion

# Projects

1

## British Airways

### Sentiment Analysis and Customer Experience

Aviation industry highly focuses on improving their customer experience. Use big data analytics to collect the reviews from Flight Passengers and finds the most common positive and negative reviews.

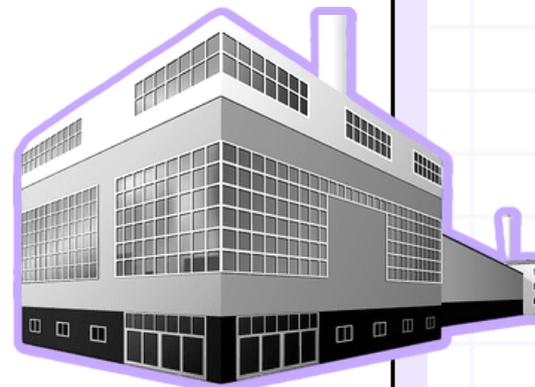

2

## PepsiCo

### Optimizing Warehouse operations with Supply Chain Analytics

Warehouse at PepsiCo Deals with three factors: Picking. Process. Execution. Formulate and present a best plan for the execution of the orders in the least possible time considering the Turn Around Time.

# Projects

3

## Flipkart

Flipkart 

### Market Basket Analytics and Sales Growth

Flipkart with its 400+ million registered users implements data analytics to recommend best products. Implement Market Basket Analysis to provide recommendation to users and increase Sales revenue.

4

## American Express

AMERICAN  
EXPRESS

### Card Limit Analysis For Targeted Marketing

Minimize default risk by setting suitable credit limits based on income, credit rating, improving risk management, targeted marketing efforts, and increasing profitability.

# Projects

5

BMW

## BMW's Electronic and Hybrid Vehicle Trend Analysis

Uncover insights into the most popular models and identify the most environmentally friendly choices by understanding consumer preferences and environmentally conscious choices.

6

Accenture

accenture

## Content Creation and Market Trend Analysis

Develop a content creation strategy for a social media client, working on identifying and incorporating new trends to enhance the client's online presence.

[Get Certified From Accenture](#)

# Projects

7

## Tata Group

### Tata IQ Optimize

Collaborate with Tata IQ to optimize business processes, presenting key insights to a client for process optimization and improved efficiency.

Get Certified From Tata Group

8

## PWC

### Customer Retention

Clean, wrangle, and visualize telecom customer data using PowerBI to assist the client in better retaining their customers and improving overall client relationships.

Get Certified From PWC

50+ more Domain Specific Projects
